S Elliott : Atom@tak: RSC before purchasing it in order to gauge whether or not it would be worth my time, and all praised Atom@tak: RSC:

This unique card game, for up to four players, is a game of chance and tactics for all ages. The cards represent elements, and the aim of the game is to build as many compounds as you can. The concepts of potentially explosive combinations, toxicity and radioactivity are introduced as a means of attacking your opponent and destroying their compounds. No knowledge of chemistry is required, but by playing the game participants should acquire a basic understanding of the building blocks of chemistry. Whilst ideal as a classroom resource for ages 11+, ATOM@TAK will also be a lively card game for families everywhere and a great way of introducing young people to the wonders of chemistry.
