Sharon Traweek : Beamtimes and Lifetimes: The World of High Energy Physicists before purchasing it in order to gage whether or not it would be worth my time, and all praised Beamtimes and Lifetimes: The World of High Energy Physicists:

0 of 0 people found the following review helpful. First of it's kind in anthropological literature.By Riley CollinsOne of the first ethnographies of scientists and scientific work, Traweek's monograph is an essential starting point for any social scientist interested in an ethnographic approach to scientists; one of the first to suggest that scientists could have

"culture" removed from other allegiances.0 of 0 people found the following review helpful. A classic and must read for anyone interesting in the ...By Anthro StudentA classic and must read for anyone interesting in the culture of science in general and physics in particular.0 of 0 people found the following review helpful. Interesting book in the field of social studies of scienceBy MartaThis is an unique book on ethnographies in laboratories. Specially because Traweek do a cross-national comparison between Japanese and American research laboratories and scientists.

The unique breed of particle physicists constitutes a community of sophisticated mythmakers--explicators of the nature of matter who forever alter our views of space and time. But who are these people? What is their world really like? Sharon Traweek, a bold and original observer of culture, opens the door to this unusual domain and offers us a glimpse into the inner sanctum.

Every sensitive observer of contemporary science and technology will want to read this short, compelling description. (Susan E. Cozzens Science)A groundbreaking work about how modern science functions. As the only anthropologist studying high-energy physics, Traweek brings a unique and valuable perspective to the study of this curious and important modern community. (Michael Riordan Technology)Traweek gets inside the heads of physicistsShe shows their similarities and difference, how their careers are shaped, how they interact with their colleagues, how they do physics and how their ideas about time and space shape their social structure. Traweek has produced a revealing and intimate look at this exclusive world and its mores. (Lee Dembart Los Angeles Times)Traweek's account successfully captures much of the flavour of the high-energy physicist's way of lifeThey aspire to reveal the immutable, everlasting laws governing the evolution of the universe "outside human space and time" yet the physicist themselves, only brief visitors to this world, are all too human, children of their cultures in their pride and frailties. (John Mulvey Times Higher Education Supplement)About the AuthorSharon Traweek is Professor of Anthropology at Rice University.
