This book covers in great detail virtually all known methods for making LSD. Emphasis is placed on using botanical sources of lysergic acid such as ergot and morning glory seeds, but extraction of ergotamine migraine pills is also covered. Every recipe is presented along with references back to the original works in the scientific literature. The terminology used in the scientific works has been clarified and simplified, but each procedure is true to the original work. In addition, I also cover the production of the psychedelic TMA-2 from easily available and cheap calamus oil. Now that saffron oil is difficult to obtain, this subject should be of great interest.

The title says it all! --High Times The underground mastermind of psychedelic cookery provides Owsley-wannabes with the most detailed and concise descriptions of the methods and processes used in making LSD from natural sources. --Bookpaper About the Author I have been training the champions of the field of clandestine chemistry for 20 years now, and am considered to be the founder of this field in its modern form. I also raise a couple of children and work a dayjob. I am one busy guy!
